

A smile is a facelift that's in everyone's price range!

One of the first things people notice is your smile. It portrays your personality and self-image; it's the window to your world! If you want to feel confident and secure when you meet people, take photos or even look in the mirror, then cosmetic dentistry is for you! There are numerous negatives associated with an unattractive or unhealthy smile, but according to Dr Angie Papas, modern dentistry has a vast array of techniques and procedures to help you smile again.

Fixing crooked, missing or stained teeth, gives you a new found confidence that's a lifetime investment. Dr Papas agrees that a smile makeover can turn back time erasing years from your appearance; it can be the quickest facelift you can have!

If you are not sure you'll love the end result, Dr Papas offers dental imaging so you can see the final result before your smile makeover begins!

Techniques like whitening, bonding or enamel shaping change the appearance and shape of the patient's natural teeth. Other techniques like crowns, veneers, bridgework and implants provide permanent replacements for missing or misaligned teeth. Some of these procedures involve just one or two visits to the dentist, while others may take months to complete. "It's always gratifying to see patients' faces light up when they see themselves in the mirror after a smile makeover-their reaction is priceless" comments Dr Papas "with their confidence restored, they are ready to share their new smile with the rest of the world". We are not all born with a beautiful smile but we are all born with the ability to smile! We are living in an exciting era in dentistry, an era focused on facial beauty and how better to describe the importance of a confident smile than Nat King Cole's song 'Smile': *"You'll get by if you smile through your fear and sorrow... Smile and maybe tomorrow you'll see the sun come shining through"*.
